

## Our Holiday Gift to You

Dr. Bentkover Wishes You a Happy Holiday Season

December 2007

We are grateful and thankful to all our patients for the loyal support that they have shown us over the years. In that light, we were thinking what we might do to show our appreciation this holiday season. This time of year many of you visit our office for quick, in office procedures to help you look your best for the holidays. Nancy had the great idea that we should offer special discounts on those treatments throughout the month of December as a way of saying, "Thank You". So, for the entire month of December we will have special discounts on all our office injectible treatments. We will also have special pricing on stocking stuffers and gift certificates. The details are listed below.

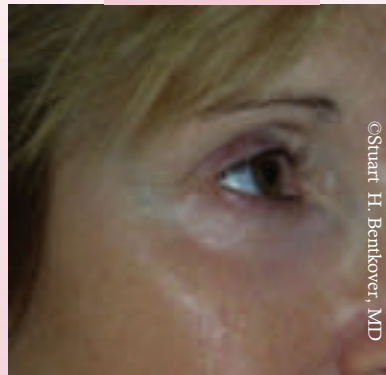

In addition, to accommodate your busy schedules, we will be open a number of Saturdays for injections. So far we are scheduling Saturday, December 15, from 1:30 PM to 5:30 PM. Why not take a break from your shopping to do something for yourself.

*From all of us at Bentkover Facial Plastic Surgery, may you have a happy, healthy and prosperous holiday season.*

After Botox®

### Our Gift To You, throughout December

- \$50 off your Botox® Treatment
- \$50 off your Radiesse® or Juvéderm™ treatment
- 10% off gift certificates of \$500-\$1000
- 15% off gift certificates over \$1000
- 10% off Obagi® Products.
- Specialty priced stocking stuffers of Procyte™ and Procyte Neova™ products. Nancy has put together a number of their most popular products in gift bags.

### December Product Highlight: BOTOX®

There is still some confusion in the marketplace about what Botox® is and what it does. Botox® is what is called a *neuromodulator*. It is not a facial filler and certainly is not a poison. Botox® is the highly purified form of *Botulinum* toxin type A and is *extremely safe*. It temporarily changes the way nerves transmit their messages to muscles. Most Botox® is used for therapeutic reasons, especially in children with tight muscles from cerebral palsy and strabismus (lazy eye). Cosmetically, it is used to partially block the action of the muscles that cause you to scowl or knit your brow, to decrease crow's feet wrinkles, to slightly elevate your brow, and to flatten creases in your chin. The only real downside of Botox® is that it lasts only about 3-4 months (another product in development may last a bit longer), and a few people are immune to it. As hundreds of our patients already know, **Botox® is affordable and just great maintenance.**
